

Programming Example: List connected VISA compatible resources using PyVISA

August 30, 2018

PyVISA is a software library that enables Python applications to communicate with resources (typically instruments) connected to a controlling computer using different buses, including: GPIB, RS-232, LAN, and USB.

This example scans and lists the available resources.

It requires PyVISA to be installed (see the PyVISA documentation for more information)

```
#Example that scans a computer for connected instruments that
#are compatible with the VISA communication protocol.
#
#The instrument VISA resource ID for each compatible instrument
#is then listed.
#
#
#Dependencies:
#Python 3.4 32 bit
#PyVisa 1.7
#
#Rev 1: 08302018 JC
```

```
import visa
```

```
def main():
```

```
    rm = visa.ResourceManager()
    print (rm.list_resources())
```

```
if __name__ == '__main__':
```

```
    main()
```

Here is the code:

```

PyVisaResourceList.py - C:/Users/jayre/Documents/Application Notes/PyVISA/PyVisaResourceList.py (3.4.3)
File Edit Format Run Options Window Help
#Example that scans a computer for connected instruments that
#are compatible with the VISA communication protocol.
#
#The instrument VISA resource ID for each compatible instrument
#is then listed.
#
#
#Dependencies:
#Python 3.4 32 bit
#PyVisa 1.7
#
#Rev 1: 08302018 JC

import visa

def main():
    rm = visa.ResourceManager()
    print (rm.list_resources())

if __name__ == '__main__':
    main()
|

```

And here is the result of a scan:

```

Python 3.4.3 Shell
File Edit Shell Debug Options Window Help
Python 3.4.3 (v3.4.3:9b73f1c3e601, Feb 24 2015, 22:43:06) [MSC v.1600 32 bit (Intel)] on win32
Type "copyright", "credits" or "license()" for more information.
>>> ===== RESTART =====
>>>
('USB0::0x0483::0x7540::SPD3XGB4150080::INSTR', 'USB0::0xF4EC::0x1301::SVA1XEAX2
R0073::INSTR', 'TCPIP0::192.168.55.122::inst0::INSTR')
>>> |

```

Each connected instrument returns a specific formatted string of characters called the VISA Resource ID.

The resource ID format is as follows:

'Communication/Board Type (USB, GPIB, etc.):Resource Information (Vendor ID, Product ID, Serial

Number, IP address, etc.):Resource Type'

In the response, each resource is separated by a comma. So, we have three resources listed in this example:

'USB0::0x0483::0x7540::SPD3XGB4150080::INSTR' - This is a power supply (SPD3X) connected via USB (USB0)

'USB0::0xF4EC::0x1301::SVA1XEAX2R0073::INSTR' - This is a vector network analyzer (SVA1X) connected via USB (USB0)

'TCPIP0::192.168.55.122::inst0::INSTR' - This is an instrument connected via LAN using a TCPIP connection at IP address 192.168.55.122
